

PRODUCT

The future of money is transparent, backed, decentralised and accessible.

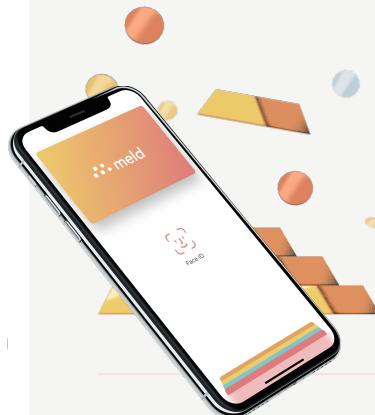

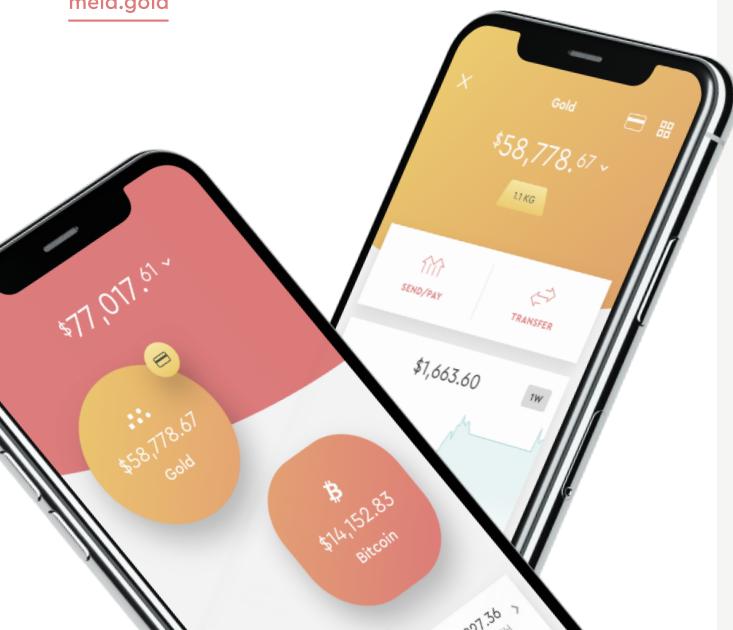

PROBLEM

The global financial system is broken. Consumers are desperate for a fairer playing field – one where they are in control. Blockchain and cryptocurrencies have paved the way for change, but the landscape remains user-hostile and risky, resulting in a demand for utility and stability.

SOLUTION

With over 100 years of precious metals expertise, Melbourne Mint and their partners are leading the way with a product that digitises gold, making it usable all over the world. A gold-backed digital currency that's safe, stable and supported by an expanding network of partners – answering the need for the world's first truly tradable global currency.

meld.gold

Wealth management has never been easier to control.

- Pay using gold, crypto and fiat
- Save on trading fees
- Cold storage for digital assets
- Withdraw physical gold

- Refer and earn gold
- Access to a global gold partner network

TEAM

Melbourne Mint

FOUNDING PARTNER
